RH5169.3prime RH Drosophila melanogaster normalized Head pFIC-1
Drosophila melanogaster CDNA clone RH51659 3 similar to CG12919:
PBan0012919 GO:[] located on: 2R 46E1-46E1; 08/05/2002, mRNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Dawrence Berkeley National Lab
One Cyclotron Rd, Berkeley, CA 94720, USA
Eax: 510 486 6798
Email: http://www.fruitfly.org/EsT, est@fruitfly.berkeley.edu
Based upon the presence of a XhoI site followed by a run of 14 or
more T residues at the beginning of the sequence, this clone was
polyadenylated. The resulting Poly-T sequence has been removed. hit

Based upon the presence of a XhoI site followed by a run of 14 or
more T residues at the beginning of the sequence, this clone was
polyadenylated. The resulting Poly-T sequence has been removed. hit

/note="Organ: kidney + adrenal; Vector: pBluescript II
/note="Organ: kidney + adrenal prepared clones.

CDNA synthesis was initiated using an oligo(dT) primer,

using methylated C in the first strand prediction.

Following this first strand reaction, double-stranded cDNA
was blunted, ligated to Not! adapters, digested with
Compatible sites of a custom modified MCS of the
pBluescript (KS+) vector. The library was normalized in 2
rounds using conditions adapted from Soares et al., pNAS
(1994) 91: 9228-9212 and Bonaldo et al., Genome Research 6
(1995): 791, except that a significantly longer
reannealing hybridization was used."

/note="Vector: pExpress-1; Site_1: EcoRV; Site_2: NotI;
Bulk tissue was collected from a whole 10 month old male
from the F6 strain. 1st strand cDNA was primed with a Not
I - oligo(dT) primer, double-stranded cDNA was cloned into
the Not I and EcoRV sites of pExpress-1. Library was
size-selected for >1.5 kb fragments for an average insert
size of 1.92 kb. Library was normalized to Cot5 with a
180-fold reduction of actin. A non-normalized version of
this library is also available (NICHD XGC_Swbl). Library
was constructed by Open Biosystems (Huntsville, AL)."
